

Preventing Unintended or Unauthorized Switch Operation!

Series 24 Switch
with Bump-Proof Handle

NEW!

Bump-Proof Handle Prevents Unintentional Operation

- **Requires deliberate 2-step operation**
To operate the switch, handle must be aligned and pushed in to engage before turning
- **Easy field installation**
Fast and easy upgrade to existing switches
- **Cost-effective**
Less than 50% of the cost of adding external enclosures or covers

New handle requires deliberate 2-step operation

Handle rotates freely a full 360° when not engaged.
To operate switch, engage handle as shown below.

1 Align arrows on
handle and
shaft collar

2 Push handle
towards faceplate
to engage/operate
